

VIBE CODING INCOME

Deep Research Report — Australia, 2026

For: Josh (Dubbo NSW) · Solo dev · Busy parent of two · Wants passive/semi-passive income with minimal support burden · No financial advice / medical advice products

This report is the result of live research conducted in June 2026. It evaluates 22 vibe-coded product ideas specifically for a time-poor Australian solo developer who wants real passive or semi-passive income — not hype. Every idea is scored honestly. Survivorship bias is called out. Australian legal, tax, and privacy obligations are addressed directly. A complete build plan is provided for the single best idea.

REALITY CHECK BEFORE WE START

The median Gumroad creator earns **\$72/month**, and **44% of all Gumroad products earn \$0** (InsightRaider, analysis of 146k products, 2026). Most vibe coding "income" articles cite outliers. The real ceiling for a solo parent with limited time is **\$200–\$800/month passive** within 6 months, or **\$300–\$900 one-time** per done-for-you client project. That is still meaningful, but set expectations correctly. Distribution — getting buyers to your product — is harder than building it. Validation before building is the **#1** factor separating earners from zero-revenue creators.

SECTION 1 — MARKET CONTEXT

Vibe coding is real and mainstream. Google Trends search volume for "vibe coding" spiked 2,400–6,700% in 2025 (Collins Dictionary named it Word of the Year). 92% of US developers use AI coding tools daily (Vendasta, 2026). Non-developers are now shipping real products.

But most products earn nothing. 44% of Gumroad products earn \$0. The median creator earns \$72/month. Success stories are real but are survivorship-biased. A small portfolio of apps earning \$1K MRR can be sold for \$24K–\$48K on Acquire.com — that is the realistic high-end goal.

What actually sells in 2026: Niche-specific Notion/code templates (~\$39–\$99 one-time), printable educational content on Etsy (~\$5–\$25), software tools on Gumroad (~\$29–\$75), done-for-you mini apps for local businesses (\$300–\$900), and digital product bundles.

Australian notes: Lemon Squeezy and Gumroad are both Merchant of Record — they handle GST collection and remittance automatically. As an Australian resident, you only register for GST yourself once your total annual turnover hits A\$75,000. Below that, you still need an ABN and declare income. Gumroad fees: 10% platform + ~3.2% processing = ~13% effective. Lemon Squeezy: 5% + \$0.50/transaction — better at scale. Both handle global tax.

SECTION 2 — ALL 22 IDEAS EVALUATED

Each idea is rated across 6 dimensions. Scores are out of 10. Confidence = overall viability confidence (0–10).

#1 PlayKit AI — Kids Activity Generator		Confidence: 7/10/10
Tagline	Parents enter what they have at home; app generates play ideas	
Target buyer	Tired Australian parents of toddlers/primary-age kids, Facebook groups, Mum/Dad communities	
Why they pay	Immediate practical pain: "what do I do with my bored kid RIGHT NOW". No prep. No shopping.	
Build difficulty	Low-Medium — React app + Claude/OpenAI API call, inventory input form, printable output	
Time to MVP	Weekend (6–10 hrs) for MVP with 5 categories	
Support burden	Low once live — only support is if API breaks. No user accounts needed at launch.	
Price range	A\$14.99–A\$29 one-time / A\$49 bundle with printable PDF pack	
Sales channels	Gumroad or Lemon Squeezy (direct link), Facebook parenting groups, Pinterest, Reddit r/Parenting	
Competition	Medium — FunSpark (\$49.99 USD) exists on Gumroad. But that's a prompt pack, not an interactive web app. Gap exists for AU-localised interactive tool.	
Legal/privacy risk	LOW. No health data collected. Disclaimer: 'not professional advice, supervise children'. ACL consumer guarantees apply — product must work as described. No privacy obligations beyond standard terms if no login.	
Busy parent fit	High — solves a daily problem, quick to use	
ROI potential	Medium-High (~A\$300–700/month at steady state with no paid ads)	
Passive potential	High — digital product, automated delivery, no ongoing work once live	
Notes	Validation: post in 3 FB parenting groups BEFORE building — 'would you pay \$15 for a web app that generates 10 activities based on what you have at home?' Aim for 10 yes replies before touching code. Existing competitor FunSpark (US) is a prompt pack at \$49.99 — a real interactive app at \$15–\$29 with AU framing is differentiated.	

#2 100 Low-Effort Play Ideas — Digital Pack		Confidence: 6/10/10
Tagline	Downloadable PDF + bonus web generator for parents who want instant activities	
Target buyer	Tired parents, gift-buyers, early childhood educators	

Why they pay	A curated, beautifully formatted PDF they can print or use on phone. Instant gratification. No thinking.
Build difficulty	Very Low — PDF made in Canva/Pages + optional simple Gumroad product page. Bonus web generator is optional.
Time to MVP	1–3 hours for PDF alone. Add 4–6 hrs for a simple web version.
Support burden	Near-zero. PDF is static. No app to break.
Price range	A\$9.99–A\$19.99 for PDF. A\$29–\$49 for bundle with web generator.
Sales channels	Etsy (search volume is huge for kids activity printables), Gumroad, Pinterest pins
Competition	High on Etsy (crowded). Low-Medium for a web-generator bundle (differentiated).
Legal/privacy risk	VERY LOW. Static PDF. Standard ACL disclaimers. No privacy obligations at all if you don't collect emails.
Busy parent fit	Very High — create once, sell forever
ROI potential	Low-Medium as pure PDF (\$50–\$200/month). Medium if bundled with web app.
Passive potential	Very High — perfect passive product
Notes	Good validation product. Start here to test if parents in your network will pay before building PlayKit. If 5 people pay A\$10 for a PDF, that confirms demand for the app version.

#3 NDIS / OT / Speech Home Activity Planner		Confidence: 5/10/10
Tagline	Generate therapy-friendly home practice activities for families with NDIS participants	
Target buyer	Parents of NDIS participants, support coordinators, allied health assistants	
Why they pay	Fills the gap between therapy sessions. Therapists don't have time to write home programs.	
Build difficulty	Medium — needs careful UX to avoid appearing to give therapy advice	
Time to MVP	1–2 weekends	
Support burden	Medium — niche users ask specific questions. Risk of being treated as medical advice.	
Price range	A\$29–\$49 one-time for parent version; A\$99–\$199 for therapist/professional version	
Sales channels	Facebook NDIS parent groups, NDIS provider networks, OT professional groups	
Competition	Low-Medium in the app space, but very contested in terms of trust.	
Legal/privacy risk	MEDIUM-HIGH RISK. You are NOT an NDIS provider (so NDIS Practice Standards don't apply directly to a tool seller). BUT: if you collect any participant data, Privacy Act APPs apply. If the tool generates anything that looks like clinical advice, you risk misleading conduct under ACL. Key mitigation: clear 'not medical/therapeutic advice' disclaimer, no login/no data storage, framed as 'home activity inspiration only'. Do NOT market to registered NDIS providers directly.	
Busy parent fit	Medium — possible but requires careful positioning	
ROI potential	Medium	
Passive potential	Low-Medium (niche, trust barrier)	
Notes	Riskier than PlayKit due to perception issues, but the niche is underserved and high-pain. Proceed only if you validate with at least 5 NDIS parents willing to pay before building. Consider the parent-facing version first, never the therapist version without professional legal review.	

#4 Teacher / Therapist Activity Planner		Confidence: 6/10/10
Tagline	Higher-priced tool for teachers, speechies, OTs, and support workers to generate home activity plans	
Target buyer	Allied health professionals, teachers, preschool educators, support workers	
Why they pay	Saves 30–60 min of manual programming per client. Charged to employer or NDIS plan.	
Build difficulty	Medium — similar to PlayKit but with professional framing and higher price point	

Time to MVP	1–2 weekends
Support burden	Medium — professionals ask specific questions and expect accuracy
Price range	A\$99–\$199/year subscription or A\$149 lifetime access
Sales channels	OT Australia online communities, Speechpath Facebook groups, Teachers Pay Teachers
Competition	Low-Medium in AU market for interactive tools
Legal/privacy risk	MEDIUM RISK. ACL applies. AHPRA (Allied Health Regulator) does not regulate tools/software but will notice if you imply clinical outcomes. No NDIS provider registration needed if you're selling a generic tool. Avoid storing client information.
Busy parent fit	Medium — some evenings needed to market in professional communities
ROI potential	Medium-High if it gets traction in professional networks
Passive potential	Medium (recurring potential if subscription)
Notes	Higher price point = fewer sales needed to hit income targets. 10 sales at A\$149 = A\$1,490. The marketing channel (professional Facebook groups) is specific and reachable.

#5 Printable Activity Card Generator		Confidence: 5/10/10
Tagline	Focused mini-tool: enter a prompt, get a print-ready activity card	
Target buyer	Parents, teachers, homeschoolers	
Why they pay	Saves time formatting. Printable output is ready-to-use.	
Build difficulty	Low — simpler version of PlayKit focused on card layout output	
Time to MVP	1 weekend	
Support burden	Very Low	
Price range	A\$9.99 one-time for PDF pack / A\$19.99 for interactive web generator	
Sales channels	Etsy, Gumroad, Pinterest	
Competition	Medium on Etsy (printable cards are popular)	
Legal/privacy risk	Very Low	
Busy parent fit	Very High	
ROI potential	Low-Medium (volume required)	
Passive potential	High	
Notes	Decent passive product but likely cannibalised by the PlayKit idea. Could be a lower-priced entry product leading into PlayKit upsell.	

#6 AI Activity Planner Starter Kit (Code Template)		Confidence: 5/10/10
Tagline	Sell the codebase so others can build their own activity planner app	
Target buyer	Non-technical or semi-technical creators who want to launch a similar tool	
Why they pay	Saves days of build time. Ready-to-deploy Vercel/React project.	
Build difficulty	Low if PlayKit already built — just clean the code and document it	
Time to MVP	3–5 hours to clean up and document	
Support burden	Low — occasional questions about setup	
Price range	A\$49–\$99 one-time on Gumroad	
Sales channels	Gumroad, Twitter/X builder community, Indie Hackers	
Competition	Medium (template market is competitive)	
Legal/privacy risk	Very Low — selling code, not advice	
Busy parent fit	Medium — requires builder audience to discover it	
ROI potential	Low-Medium	
Passive potential	High	
Notes	Best done AFTER you've built and validated PlayKit. Then sell the template as a side product. The audience is builders, not parents — so you need to be in builder communities.	

#7 Interview Prep App — Australian Casual Jobs		Confidence: 6/10/10
Tagline	Role-specific practice questions and STAR answer builder for Woolworths, APS, council, ABS Census etc.	
Target buyer	Job seekers, school leavers, career changers, migrants	
Why they pay	Anxiety-reducing, practical, specific to AU context. Job market is tough in 2026.	
Build difficulty	Low-Medium — input role + employer, generate likely questions + STAR framework	
Time to MVP	1 weekend	
Support burden	Low	
Price range	A\$9.99–A\$19.99 one-time	
Sales channels	Reddit r/AusJobs, Seek community forums, Facebook job seeker groups	
Competition	Medium-High globally, Low in AU-specific niche	
Legal/privacy risk	Very Low	
Busy parent fit	Very High	
ROI potential	Low (needs volume — low price point)	
Passive potential	High (digital download / simple web app)	
Notes	Strong AU-specific angle differentiates from generic interview prep tools. Price is low, so you need volume. Consider A\$9.99 with an upsell PDF bundle. Validate on Reddit r/AustralianPolitics, r/AusJobs before building.	

#8 School ICT Micro-Training Portal		Confidence: 5/10/10
Tagline	Short interactive training modules for school staff: ViewBoard, OneDrive, printing, HDMI, Teams	
Target buyer	School ICT coordinators, principals, school admin staff buying for their school	
Why they pay	Schools waste hours on informal IT support. A self-service portal saves the ICT coordinator time.	
Build difficulty	Medium — needs content creation + simple quiz/progress tracking	

Time to MVP	2–3 weekends
Support burden	Medium — schools will ask for customisation
Price range	A\$149–A\$299/school/year or A\$99 one-time per school
Sales channels	Direct email to ICT coordinators, LinkedIn, AISNSW/CESA/state education networks
Competition	Low in AU school micro-niche
Legal/privacy risk	Low — not storing student data. Schools are data-sensitive so 'no student data, staff-only' must be clear.
Busy parent fit	Low — requires B2B sales, not passive
ROI potential	Medium-High if 20+ schools subscribe
Passive potential	Low-Medium (requires active sales effort)
Notes	Your school ICT experience is a genuine moat here. BUT it is not passive — getting schools to buy requires direct outreach, demos, and purchase orders. Consider this for 'client project' revenue (see #18) rather than passive income.

#9 School Tech FAQ / Helpdesk Template		Confidence: 5/10/10
Tagline	A customisable searchable FAQ portal template for schools to host themselves	
Target buyer	ICT coordinators who want a ready-made knowledge base	
Why they pay	Saves hours building from scratch. They customise and deploy.	
Build difficulty	Low — mostly content + simple search interface	
Time to MVP	1 weekend	
Support burden	Very Low — static content, no user accounts	
Price range	A\$49–A\$99 one-time for the template	
Sales channels	Gumroad, LinkedIn education groups, AU ICT education Facebook groups	
Competition	Low	
Legal/privacy risk	Very Low	
Busy parent fit	High — quick to build, quick to sell	
ROI potential	Low (low price, low volume in niche)	
Passive potential	High (digital product)	
Notes	A template version of #8. Lower price, lower effort, but also lower revenue ceiling. Good as an entry product to build trust in the school ICT niche.	

#10 Local Small Business Tech Checklist App		Confidence: 5/10/10
Tagline	Businesses enter their tech setup; app generates a health checklist with recommendations	
Target buyer	Small business owners: cafes, tradies, retailers, sole traders	
Why they pay	"Am I missing something?" anxiety. Tech setup is overwhelming for non-techies.	
Build difficulty	Low — checkbox input form + conditional logic output	
Time to MVP	1 weekend	
Support burden	Very Low	
Price range	A\$9.99–A\$19.99 or FREE with email capture for lead gen	
Sales channels	Gumroad, local business Facebook groups, BNI networks	
Competition	Low	

Legal/privacy risk	Very Low — no financial or health advice
Busy parent fit	High
ROI potential	Low (needs volume or used as lead gen)
Passive potential	High
Notes	More useful as a lead generator for a done-for-you tech audit service (charge A\$300–\$500 per audit) than as a standalone paid product. The checklist is thin value alone.

#11 Kids Phonics App Starter Template		Confidence: 4/10/10
Tagline	A clean React phonics mini-app starter for parents or creators to customise	
Target buyer	Parent-developers, homeschool community builders, EdTech bootstrappers	
Why they pay	Saves build time. The phonics space needs better AU-specific tools.	
Build difficulty	Medium — needs phonics logic + audio playback to be credible	
Time to MVP	2 weekends	
Support burden	Low — it's a template sale, not a live app	
Price range	A\$49–\$79 one-time	
Sales channels	Gumroad, Indie Hackers, homeschool developer communities	
Competition	Low in AU	
Legal/privacy risk	Low — no student PII if it's a template	
Busy parent fit	Medium — requires a builder audience	
ROI potential	Low-Medium	
Passive potential	High	
Notes	Lower confidence because the audience (developer-parents who want to build phonics apps) is small and hard to find. Consider building the full phonics app for Sylvie and Elias first, then selling the template as a side product.	

#12 Therapy Homework Planner Template		Confidence: 5/10/10
Tagline	Lightweight tool or template for therapists to generate take-home activity plans for families	
Target buyer	Private practice OTs, speechies, physios — solo practitioners	
Why they pay	Saves 20–30 min per client per week on homework writing	
Build difficulty	Low-Medium	
Time to MVP	1 weekend	
Support burden	Low-Medium — professionals may ask questions	
Price range	A\$79–\$149 one-time	
Sales channels	Speechpath and OT Facebook groups, private practice networks	
Competition	Low in AU	
Legal/privacy risk	Medium — same AHPRA/ACL framing considerations as #3. 'Not clinical advice' disclaimer required.	
Busy parent fit	Medium	
ROI potential	Medium	
Passive potential	Medium	
Notes	Viable niche. Lower volume than parent products but higher price. Best bundled with #3 or #4 as a professional tier.	

#13 TradeJournal Lite		Confidence: 6/10/10
Tagline	Personal trading journal to record paper trades, emotions, and plan/outcome review	
Target buyer	Retail traders, beginners learning to trade consistently	
Why they pay	Discipline and self-review are the #1 thing experienced traders recommend. Generic spreadsheets are clunky.	
Build difficulty	Low — form input + local storage / CSV export. No real-money trading, no API connections.	
Time to MVP	1 weekend	
Support burden	Low	
Price range	A\$19.99–\$49 one-time / A\$75 as seen on Gumroad (competitor pricing)	
Sales channels	Gumroad, Reddit r/AusFinance, r/Daytrading, Discord trading servers	
Competition	Medium — many trading journals exist (both apps and spreadsheets). But AU-specific + simple is differentiated.	
Legal/privacy risk	LOW. No financial advice given. No real-money integration. No ASIC obligations for a passive journaling tool. Standard ACL + clear 'not financial advice' disclaimer required. You do NOT need an Australian Financial Services Licence (AFSL) for a journaling tool.	
Busy parent fit	High — build once, minimal support	
ROI potential	Medium	
Passive potential	High (digital product)	
Notes	A trading journal is on the right side of the ASIC line because it records the user's own decisions — it does not recommend trades. The \$75 Gumroad competitor confirms willingness to pay. An AU-focused version at A\$29–\$39 with a clean UI could convert well.	

#14 Paper Trading Simulator		Confidence: 4/10/10
Tagline	Simulated stock market environment with fake money for learning to trade	
Target buyer	Beginner investors, uni students, people scared to put real money in	

Why they pay	Learn without risk. AU market framing (ASX) is rare.
Build difficulty	Medium-High — needs realistic price data (even delayed) and a portfolio engine
Time to MVP	2–4 weekends
Support burden	Medium — users report bugs, want features
Price range	Free with email capture / A\$9.99–A\$19.99 for advanced features
Sales channels	Reddit r/AusFinance, university Facebook groups
Competition	Medium — Investopedia stock simulator, MarketWatch simulator exist (free)
Legal/privacy risk	Medium. Using ASX delayed data is fine. No AFSL needed for paper trading. But marketing copy must never imply users can replicate returns with real money. 'Educational purposes only' required prominently.
Busy parent fit	Medium — more build and support than ideal
ROI potential	Low-Medium
Passive potential	Low-Medium
Notes	Competing against free tools makes monetisation harder. Build complexity is higher than TradeJournal. Not recommended as a first product.

#15 AI Trading Lab — 'Give AI fake \$100 and see what happens'		Confidence: 5/10/10
Tagline	Simulated portfolios managed by AI personalities with a leaderboard and learning focus	
Target buyer	Curious beginner investors, tech enthusiasts who want entertainment + learning	
Why they pay	Novelty + learning. 'What would the AI do?' has viral potential.	
Build difficulty	Medium-High — AI integration, portfolio simulation, leaderboard	
Time to MVP	2–3 weekends	
Support burden	Medium — users want more AI personalities, better stats	
Price range	Free with email capture / A\$4.99–\$9.99/month	
Sales channels	Product Hunt launch, Reddit, Twitter/X	
Competition	Medium (novelty is differentiator)	
Legal/privacy risk	Medium. Same as #14. The 'simulated' framing insulates from AFSL requirements IF the app never implies real trading outcomes. High-profile marketing using 'AI trading' language could attract ASIC scrutiny. Keep framing firmly educational/entertainment.	
Busy parent fit	Medium	
ROI potential	Medium-High (viral potential)	
Passive potential	Medium	
Notes	More fun and more shareable than a plain simulator. Product Hunt-worthy. But requires sustained marketing energy. Not truly passive.	

#16 Risk / Position Size Calculator		Confidence: 4/10/10
Tagline	Simple calculator: account balance + risk % → max position size, stop loss in \$	
Target buyer	Active retail traders, forex/CFD learners	
Why they pay	This calculation is done manually and often wrong. A clean AU-dollar-native tool fills a gap.	
Build difficulty	Very Low — pure math, single page	
Time to MVP	2–4 hours	
Support burden	Near-zero	

Price range	FREE (with email capture) or A\$4.99 one-time as part of a bundle
Sales channels	Reddit r/AusFinance, r/Forex, Discord servers
Competition	High — many free calculators exist
Legal/privacy risk	VERY LOW. Pure math tool. 'Not financial advice' disclaimer. No AFSL needed.
Busy parent fit	Very High — 2–4 hour build
ROI potential	Low alone. Medium as part of a TradeJournal bundle.
Passive potential	High
Notes	Best as a free lead magnet bundled with TradeJournal (#13). Standalone it's too competitive with free tools.

#17 Digital Product Bundle: PDF + Web App + Prompt Pack		Confidence: 7/10/10
Tagline	A combined product (e.g., PlayKit): printable cards PDF + interactive web app + AI prompt cheat sheet	
Target buyer	Parents or professionals who want maximum value from one purchase	
Why they pay	Higher perceived value. Justifies a higher price point. Reduces buyer hesitation.	
Build difficulty	Low-Medium — you're combining products you already built	
Time to MVP	2–4 hours if components already exist	
Support burden	Low	
Price range	A\$29–\$49 bundle (vs A\$14.99 for single product)	
Sales channels	Gumroad, Lemon Squeezy	
Competition	Low (bundles in this space are rare)	
Legal/privacy risk	Very Low	
Busy parent fit	High — maximises revenue per customer	
ROI potential	Medium-High	
Passive potential	High	
Notes	This is a pricing and packaging strategy, not a standalone idea. Build PlayKit, then add a PDF pack and a prompt sheet, and sell all three together at a higher price. Highly recommended as your default product structure.	

#18 Done-for-You Mini Apps for Local Businesses		Confidence: 6/10/10
Tagline	Build small custom tools (booking pages, FAQ bots, calculators) for Dubbo/regional businesses	
Target buyer	Local businesses without a tech person: cafes, tradies, real estate, childcare	
Why they pay	They need a working product fast. A\$300–\$900 for a tool that saves hours/week is easy ROI.	
Build difficulty	Low-Medium per project using vibe coding	
Time to MVP	4–8 hrs per client	
Support burden	High — clients ask for changes constantly	
Price range	A\$300–\$900 per project; A\$50–\$150/month retainer for hosting/maintenance	
Sales channels	Direct outreach, local BNI, Dubbo Chamber of Commerce, personal network	
Competition	Low locally	
Legal/privacy risk	Low — tools not giving professional advice	
Busy parent fit	Low — not passive. But fastest path to first real cash.	
ROI potential	Low-Medium (active work)	
Passive potential	Low (not passive)	
Notes	Fastest path to actual revenue. A Medium article reported \$612/month from this model within weeks of starting. Not passive, but the income is real and fast. Use to fund the passive product development.	

#19 Custom AI Toolkits for Clients + Template Resale		Confidence: 6/10/10
Tagline	Build a custom tool for a client; clean and resell the code as a template on Gumroad	
Target buyer	Client pays for the build; template buyers get a shortcut	
Why they pay	Dual revenue stream from one build	
Build difficulty	Medium — need to scope client work properly	

Time to MVP	Varies per client
Support burden	Medium (client management) + Low (template)
Price range	A\$500–\$1,500 client fee + A\$49–\$99 template sales
Sales channels	Client: local network. Template: Gumroad, builder communities
Competition	Low
Legal/privacy risk	Low
Busy parent fit	Low for active client work; High for template residual
ROI potential	Medium overall
Passive potential	Medium (template is passive; client work is not)
Notes	Smart strategy: every client project should produce a template. Over 12 months, 4 client projects could yield 4 Gumroad templates providing residual income.

#20 Real Stock Trading App		Confidence: 0/10/10
Tagline	A real brokerage-connected trading application	
Target buyer	N/A — RULED OUT	
Why they pay	ASIC AFSL requirement alone is disqualifying. Obtaining an AFSL costs \$10,000–\$50,000+ and takes 6–12 months minimum.	
Build difficulty	Extremely High	
Time to MVP	Months to years	
Support burden	Extremely High	
Price range	N/A	
Sales channels	N/A	
Competition	Extremely High	
Legal/privacy risk	RULED OUT. DO NOT BUILD. Requires AFSL, legal counsel, ongoing compliance, custody obligations, and significant liability.	
Busy parent fit	N/A	
ROI potential	N/A	
Passive potential	N/A	
Notes	Hard no.	

#21 AI Stock Picker / Buy-Sell Signal App		Confidence: 0/10/10
Tagline	AI recommendations on when to buy or sell securities	
Target buyer	N/A — RULED OUT	
Why they pay	Constitutes financial product advice under Corporations Act 2001 (Cth). Requires AFSL.	
Build difficulty	N/A	
Time to MVP	N/A	
Support burden	Extremely High — regulatory and legal	
Price range	N/A	
Sales channels	N/A	
Competition	Extreme	

Legal/privacy risk	RULED OUT. DO NOT BUILD. Even framing it as 'entertainment' is insufficient if it influences real money decisions. ASIC takes this seriously and has prosecuted cases.
Busy parent fit	N/A
ROI potential	N/A
Passive potential	N/A
Notes	Hard no.

#22 Crypto Mining		Confidence: 0/10/10
Tagline	Mining cryptocurrency at home	
Target buyer	N/A — RULED OUT	
Why they pay	Australian electricity rates make home mining unprofitable at current network difficulty levels.	
Build difficulty	N/A	
Time to MVP	N/A	
Support burden	N/A — unprofitable before support is even considered	
Price range	Negative (costs exceed revenue at AU power prices)	
Sales channels	N/A	
Competition	N/A	
Legal/privacy risk	Low legal risk but zero financial sense	
Busy parent fit	Very Low — not vibe coding and not profitable	
ROI potential	N/A	
Passive potential	N/A	
Notes	Hard no.	

SECTION 3 — RANKED TABLE (TOP 20 IDEAS)

Each idea scored 1–5 across 9 dimensions. Total out of 45. Ideas 20–22 excluded (ruled out).

#	Idea	Speed	Pain	Distrib	Low Support	Low Legal	Monetise	AI Fit	Parent Fit	Passive	TOTAL

SECTION 4 — THE RECOMMENDATIONS

Top 3 to Test First

1. PlayKit AI (Kids Activity Generator) — highest combined score, AU-differentiated, daily pain point.
2. Digital Product Bundle (PlayKit + PDF + prompts) — same build, higher price per sale.
3. TradeJournal Lite — fast build, proven willingness to pay, low legal risk, different audience.

Single Best Idea Overall

PlayKit AI / Kids Activity Generator, structured as a digital product bundle (PDF pack + interactive web app + AI prompt cheat sheet) sold for A\$29–\$49 on Lemon Squeezy. Solves a daily pain for a large, reachable audience. Buildable in one weekend. Low legal risk. No login/data required at MVP. Genuine passive income potential once validated.

Fastest to Launch in One Weekend

TradeJournal Lite (or Risk Calculator as free lead magnet). Static or near-static. No API required for basic version. Gumroad page live in <2 hours. Existing products at \$75 USD confirm buyers exist.

Lowest Risk Idea

100 Low-Effort Play Ideas PDF Pack — static PDF, no app to break, no API costs, no data stored, minimal ACL exposure if product does what it says. Create in Canva, sell on Etsy. Truly passive.

Most Likely to Become Passive Income

Digital Product Bundle (PlayKit). One-time payment, automated delivery via Lemon Squeezy/Gumroad, no ongoing API costs if you cache responses, no support needed for a static product. Every sale while you sleep with zero marginal cost.

Most Likely to Produce First Revenue Quickly

Done-for-You Mini App for a local business. Call 3 Dubbo businesses this week. Offer to build a booking/FAQ/calculator tool for A\$400–\$600. First cash within 7–10 days.

Ideas to Avoid

Real trading app, AI stock picker (AFSL required), crypto mining (unprofitable), real-stock paper simulator as a standalone product (too much free competition). Also avoid NDIS-specific products until you have legal clarity on your positioning.

SECTION 5 — COMPLETE BUILD PLAN: PlayKit AI Bundle

Product Promise (one sentence)

PlayKit AI gives exhausted parents 10 ready-to-go play activities based on exactly what they have at home — in under 30 seconds, for a one-time A\$29.

MVP Feature List

- Inventory input: tick-box list of common household items (no login, no account)
- Category selector: 10-min ideas / indoor / outdoor / creative / quiet time / rainy day
- Age slider: 0–2 / 3–5 / 6–9 / 10–12
- Generate button → 5–10 activity suggestions with title, materials needed, step-by-step
- Print/save button → clean printable card layout
- Disclaimer: 'Activities require adult supervision. Not professional advice.'
- Lemon Squeezy payment gate: one-time A\$29 unlocks unlimited generations
- PDF bundle included as download after purchase (100 pre-written activities)
- AI prompt cheat sheet PDF included ('Ask ChatGPT for more activity ideas — here's how')

Pricing Model

Tier	What's included	Price	Notes
Solo (recommended)	Web app (unlimited) + 100-activity PDF + prompt sheet	A\$29	Best value frame
PDF Only	100-activity PDF only	A\$9.99	Entry price for Etsy
Gift bundle	All above + printable activity calendar	A\$39	Giftable

Validation Plan (BEFORE Writing a Single Line of Code)

- Day 1: Post in 3 AU parenting Facebook groups: 'Quick poll — if there was a website where you type in what you have at home (e.g. cardboard, sticky tape, a bored 5-year-old) and it instantly gives you 10 play ideas with steps — would you pay A\$15 for lifetime access? ■■■■ or ■'
- Day 2–3: DM every person who replied positively. Ask: 'What age are your kids? What's your biggest problem with keeping them busy?' Listen. Don't sell yet.
- Day 4: If 10+ people say yes → build. If fewer than 5 → pivot the framing or price, re-test.
- Day 5: Set up a Lemon Squeezy product page with a 'coming soon / pre-order at A\$19' option. If 3 people pre-order before the app is built, you have confirmed demand.
- Kill criteria: fewer than 5 genuine 'yes' responses from people you don't know personally.

7-Day Build Plan

Day	Task	Time
1 (Sat)	Set up Vercel/Next.js project. Build inventory checklist UI. Wire age + category selectors.	3–4 hrs
2 (Sun)	Integrate Claude Sonnet API. Build prompt template. Test 20 generations manually.	3–4 hrs
3 (Mon eve)	Style the output cards. Add print stylesheet. Test on mobile.	1–2 hrs
4 (Tue eve)	Write 100 activities manually for PDF (or generate + curate with AI). Format in Canva.	2 hrs
5 (Wed eve)	Write prompt cheat sheet PDF. Format. Finalise all 3 product files.	1 hr

Day	Task	Time
6 (Thu eve)	Set up Lemon Squeezy. Configure payment gate on app. Test end-to-end purchase flow.	1–2 hrs
7 (Fri)	Write landing page copy. Add disclaimer + privacy notice. Deploy to Vercel. Soft launch to personal network.	2 hrs

First 10 Customer Acquisition Plan

- 1–3: Personal network. Post once on your own Facebook. 'I built this, would love feedback.' Offer A\$10 introductory price for 48 hours.
- 4–6: Post in 2 AU parenting Facebook groups. Not a sales post — offer a free trial of the web app for feedback. Convert 50% to paid with the A\$29 offer at the end.
- 7–8: Post the PDF-only version on Etsy at A\$9.99. Two sales will come organically within the first week if keywords are right ('rainy day activities kids printable Australia').
- 9–10: Reply genuinely in r/Parenting or r/AusParents to someone asking 'how do you keep your kids busy?'. Drop the link naturally once you've given actual advice.

Claude Code / Copilot Prompt to Build the MVP

Build a Next.js web app called PlayKit AI. The app allows parents to generate play activity ideas for their children. Features needed: 1. A checklist of common household items (cardboard, scissors, paper, playdough, blocks, blankets, cushions, sticky tape, stickers, pencils/crayons, empty bottles, fabric, sand/dirt, water, balls, chalk, bikes/scooters). Multiple can be selected. 2. A child age selector (0-2, 3-5, 6-9, 10-12). 3. A category selector (10-minute ideas, indoor, outdoor, creative, quiet time, rainy day). 4. A "Generate Activities" button that sends a POST request to /api/generate. 5. The /api/generate route calls Anthropic Claude claude-sonnet-4-20250514 with a prompt: "You are a creative play specialist. Generate 8 engaging play activities for a [AGE] year old child using ONLY these materials: [MATERIALS]. Focus: [CATEGORY]. For each activity provide: title, required materials, 3-step instructions, and estimated time. Format as JSON array." Return the JSON to the frontend. 6. Display activities as clean cards with a print button. The print stylesheet should show only the cards, one per page, formatted for A4. 7. A Lemon Squeezy payment check: if the user has not paid (check localStorage for a "paid" flag set after successful Lemon Squeezy webhook), show only the first 2 activities and a paywall overlay. 8. Footer disclaimer: "Activities require direct adult supervision at all times. This tool provides general play inspiration only and does not constitute professional advice." Tech stack: Next.js 14 App Router, Tailwind CSS, deploy to Vercel.

Landing Page Outline

Hero	Headline: 'Your kid is bored. You're exhausted. PlayKit has 10 ideas in 30 seconds.' Sub: 'Tell us what you have at home. We'll do the rest.' CTA: 'Generate free preview →'
How it works	1. Tick what you have 2. Choose an age and vibe 3. Instant activities, ready to use or print
Social proof	3–5 parent quotes (get from your validation interviews). One screenshot of a generated activity card.
What's included	Interactive web app (unlimited) + 100 activities PDF + AI prompt cheat sheet
Price	One-time A\$29. No subscription. Lifetime access.
FAQ	Is it safe for all ages? (Yes, with adult supervision) Does it use AI? (Yes, powered by Claude) Can I print the activities? (Yes) Do I need an account? (No)
Footer	Privacy policy + Terms (short, plain English) + 'Not professional or therapeutic advice'

Launch Checklist

- Validation: 10+ genuine yes responses from strangers (not just friends)
- ABN: registered with ATO (free, takes 5–10 min online)
- Lemon Squeezy account: connected to Australian bank account

- Privacy Policy on site: 'We do not collect personal information. No account required.'
- Terms of Service: includes 'not professional advice' disclaimer, ACL consumer guarantees acknowledgement
- API costs budgeted: estimate ~A\$0.01–0.03 per generation. A\$29 sale covers 1,000+ generations. You are fine.
- Vercel deployment: custom domain (optional but professional). Free Vercel tier is sufficient at launch.
- PDF files tested: open on iOS, Android, Windows, and print correctly on A4
- Etsy listing: PDF-only version at A\$9.99 with keywords ('activity cards kids printable australia')
- 3 Facebook group posts drafted and scheduled for launch day
- Income tracking: simple spreadsheet. Declare income in your annual tax return (income from digital sales = assessable income).
- GST: not required until A\$75,000 annual turnover. Track revenue in case you hit threshold (unlikely in year 1).

Stop Building If... (Kill Criteria)

- Fewer than 5 genuine 'yes' responses from strangers in your validation posts
- No pre-orders after Lemon Squeezy 'coming soon' page is live for 1 week
- Your validation questions reveal parents don't actually care about the materials constraint (they just want any ideas)
- The API costs are consistently more than A\$1 per generation (unlikely with current Claude pricing, but monitor)
- A similar free tool launches from a major player (e.g. Google, Meta, or a funded startup) during your build
- You've launched, it's been 8 weeks, and you have fewer than 10 paying customers despite active promotion — stop and pivot rather than continue spending time

SECTION 6 — AUSTRALIAN LEGAL & TAX SUMMARY

This is a plain-English summary only — not legal advice. Consult a solicitor or accountant for your specific situation.

ABN

You should have an ABN for any business activity. Free, apply at abr.gov.au. Sole trader structure is fine at this scale.

Income tax

Revenue from digital product sales is assessable income in Australia. Declare on your annual tax return. You can deduct legitimate expenses: Vercel/hosting, API costs, domain, Canva subscription, time spent building (if you keep records). Lemon Squeezy pays out net of their fee — declare gross revenue, claim their fee as an expense.

GST

Register for GST only when your annual turnover from all business activities reaches A\$75,000. Lemon Squeezy is a Merchant of Record and handles GST remittance on your behalf for international and Australian sales. Gumroad also became MoR in January 2025. This means you do NOT need to collect GST yourself until you're very large.

Australian Consumer Law (ACL)

Applies to all sales to Australian consumers. You cannot exclude consumer guarantees by disclaimer. Your product must do what it says. If it consistently fails to generate activities, buyers can seek a refund. Practical mitigation: make the product work reliably. A 'not professional advice' disclaimer is valid and protects against buyers expecting therapeutic or medical outcomes.

Privacy Act (Cth)

If you collect no personal information (no login, no email, no payment data — Lemon Squeezy handles payments), your Privacy Act obligations are minimal. If you add email capture (newsletter), you become an 'APP entity' and need a privacy policy. Keep it simple: 'We use your email only to send product updates. We don't sell it.'

NDIS / Medical Advice

You are not an NDIS provider. You are not an allied health practitioner. A general play activity tool is not clinical advice. Disclaimer: 'These activities are for general play inspiration only and do not constitute occupational therapy, speech pathology, physiotherapy, or any other professional or clinical advice. Always consult a qualified practitioner for specific therapeutic goals.'

Financial advice

A trading journal (TradeJournal Lite) does NOT constitute financial product advice. It records the user's own decisions. You do NOT need an AFSL. Required disclaimer: 'This tool is for personal record-keeping only and does not constitute financial, investment, or trading advice. Past recorded outcomes do not indicate future performance.'

Lemon Squeezy vs Gumroad

Both are fine for AU sellers at this scale. Lemon Squeezy has lower fees (5% + \$0.50) vs Gumroad (~13% effective). Both handle global tax compliance as MoR. Lemon Squeezy is recommended for new products over A\$20.

SECTION 7 — REALISTIC INCOME PROJECTIONS

Conservative, realistic, and optimistic scenarios for PlayKit AI Bundle (Year 1). Assumes no paid advertising — organic / community only.

Scenario	Monthly sales	Price	Gross/month	Fees (~13%)	Net/month	Year 1 total
Conservative (low effort, limited promotion)	5–8	A\$29	A\$145–232	A\$19–30	A\$126–202	A\$1,500–2,400
Realistic (active FB groups + Etsy)	15–25	A\$29 (web) + A\$9.99 (PDF)	A\$435–925	A\$57–120	A\$378–805	A\$4,500–9,600
Optimistic (viral moment + Pinterest)	40–60	blend ~A\$22	A\$880–1,320	A\$114–172	A\$766–1,148	A\$9,200–13,800
Done-for-you client (1-off)	1–2/month	A\$400–600	A\$400–1,200	—	A\$400–1,200	A\$4,800–14,400

Honest assessment: Most solo creators land in the conservative-to-realistic range. A\$300–\$800/month net passive income within 6 months of launch is achievable with consistent community engagement. The done-for-you client work gets you to A\$1,000+/month faster but requires your time. The ideal strategy: 1–2 local client builds for fast cash, then use that income to fund time spent on passive product marketing.

Report generated June 2026 for Josh (Dubbo NSW). Research conducted live using web search, Gumroad/Lemon Squeezy platform data, ASIC/ATO/NDIS regulatory sources, and indie maker community data. This report is for informational purposes only and does not constitute legal, financial, or tax advice.
