

DEFENSIVE OSINT AUDIT

Public Exposure Report — Joshua Luke Parris

Prepared: 05 June 2026 | Commissioned by Subject | Lawful public sources only

CONFIDENTIAL — SUBJECT-COMMISSIONED AUDIT

This report was produced at the subject's explicit request using only lawful, publicly accessible information. No hacking, credential stuffing, paid brokers, or bypassing of authentication was used. The sole purpose is to help the subject reduce, remove, or privatise unnecessary public exposure.

1. EXECUTIVE SUMMARY

This audit reviewed all publicly accessible information about Joshua Luke Parris (born 1994, Australia) across GitHub, Vercel, LinkedIn (public snippet), professional data aggregators, and live web applications. The overall public exposure level is **HIGH**. The subject maintains a large and active developer footprint across two GitHub accounts (42 + 28 repositories), numerous Vercel-deployed apps, and at least one professional profile scraped by B2B data aggregators. The most significant risks are:

CRITICAL	Personal life dashboard (Parris-Life-Dashboard) is publicly deployed on GitHub Pages and includes labelled sections for Finances, Health, Sylvie, Kristy, Work, and Faith — exposing spouse's first name and structured personal life data.
CRITICAL	Intelligence dashboard (josh-dashboard-black.vercel.app) publicly displays 4+ years of personal behavioural data: 41,199 YouTube videos, 4,660 ChatGPT conversations, YNAB/Bendigo Bank finances (Apr 2019–Dec 2025), sleep data (2,345 nights), weight, Google Maps reviews, and ANZ transaction history.
HIGH	Children named in public apps: 'SylviePhonetics' (GitHub Pages + Vercel) and 'EliasApp' (Vercel) both use children's first names in public URLs, app titles, and metadata, linkable to the subject's GitHub identity.
HIGH	ZoomInfo / professional aggregator profile publicly lists full name, employer (La Trobe University), job title (Senior Customer Care Officer), educational history (Dubbo Christian School, TAFE NSW, Cornerstone Community Australia, La Trobe Outdoor Education), and partial work history.
HIGH	Work/Job-search app (work-app-pearl.vercel.app) is publicly titled 'Dubbo Job Radar for Josh and Kristy Parris' — confirming spouse name Kristy, planned relocation to Dubbo, and active job search.
HIGH	Two GitHub accounts (joshualparris / joshuaparris-max) with 70 combined public repositories that reference family names, workplace, health systems, finance tools, and personal life infrastructure.
MEDIUM	LinkedIn profile publicly searchable with title 'Business Owner at Parris Tech Services', linkable to full name.
MEDIUM	ABN / business registration for Parris Tech Services likely searchable via ABN Lookup (not verified in this session but referenced across public profiles).
MEDIUM	Spouse's first name (Kristy) confirmed across the Life Dashboard nav menu and the Dubbo Job Radar app title — not the last name, but linkable via the subject's public identity.

LOW

GitHub bio 'IT professional with a passion for creating innovative solutions' plus avatar photo are publicly indexed and linkable to all repositories.

2. PUBLIC IDENTITY MAP

Identity / Handle	URL / Platform	Status
Joshua Luke Parris (full name)	ZoomInfo, LinkedIn (au.linkedin.com/in/joshua-parris-b314442600)	Confirmed
joshualparris	github.com/joshualparris (42 repos, user ID 130725599)	Confirmed
joshuaparris-max	github.com/joshuaparris-max (28 repos, user ID 235861209)	Confirmed
Josh Parris / J. Parris	App metadata, dashboard titles	Confirmed
Parris Tech Services	LinkedIn title, likely ABN Lookup	Confirmed
JoshuaParris1994 (YouTube)	youtube.com (not directly verified this session)	Likely
joshua.parris (Wikipedia)	en.wikipedia.org/wiki/User:Joshua.parris	Likely
@joshua.parris (Instagram/Social)	Not directly verified	Possible

3. PUBLIC DATA INVENTORY

The table below summarises the most significant confirmed findings. Each finding was verified by direct fetch of the public URL or from indexed search snippets.

Finding	Source / URL	Severity	Recommended Action
Personal Life Dashboard — nav exposes Finances, Health, Sylvie, Kristy, Work, Faith tabs	joshualparris.github.io/Parris-Life-Dashboard/	CRITICAL	Make repository private immediately. Replace with password-protected alternative or remove entirely.
Intelligence Dashboard — 4yr behavioural fingerprint: YouTube, ChatGPT, YNAB, Bendigo Bank, sleep, weight, ANZ	josh-dashboards-black.vercel.app/app/dashboards.html	CRITICAL	Password-protect or take offline. Remove from public GitHub repo. Rotate any API keys in repo.
Dubbo Job Radar — titled 'for Josh and Kristy Parris', confirms spouse name and planned move	work-app-pearl.vercel.app/	HIGH	Make repo private. Remove spouse name from app title. Rename deployment.
SylviePhonetics app — child's name in URL, title, and metadata; references her learning profile	joshualparris.github.io/SylviePhonetics/ + sylvie-app-five.vercel.app/	HIGH	Rename app and repo to neutral name (e.g. 'PhonicsGame'). Remove child's name from all metadata.
EliasApp — child's name in Vercel subdomain and app title/description	elias-app2.vercel.app/	HIGH	Rename Vercel project to neutral identifier. Update app title and metadata.

Finding	Source / URL	Severity	Recommended Action
ZoomInfo profile — full name, employer, job title, all education credentials, work history	zoominfo.com/p/Joshua-Parris/8133574103	HIGH	Submit ZoomInfo opt-out/removal request at zoominfo.com/about/privacy-center/removal
Josh Health Analyser — personal health data analysis tool, publicly titled with subject's name	health-lens-rust.vercel.app/	HIGH	Rename to generic title, or make private.
LinkedIn public snippet — 'Business Owner at Parris Tech Services'	au.linkedin.com/in/joshua-parris-b31444260	MEDIUM	Review LinkedIn privacy settings. Restrict who can see contact info and connections.
GitHub account joshualparris — 42 public repos, bio 'IT professional', avatar photo	github.com/joshualparris	MEDIUM	Audit all repos. Make personal-life repos private. Remove identifiable bio if preferred.
GitHub account joshuaparris-max — 28 public repos including MSPQuest, CanonRPG, PowerApp	github.com/joshuaparris-max	MEDIUM	Audit repos for secrets/sensitive data. Make personal repos private.
PowerApp — described as 'private, safety-first educational guide for adult couples'	power-app-delta.vercel.app/	MEDIUM	If personal, make repo private. Ensure no identifying metadata in source.
Research Atlas — 'public fantasy map for exploring deep research documents'	research-atlas-phi.vercel.app/	LOW	Review if any embedded research documents contain personal info.
Parris-Life-Dashboard repo — spouse's first name (Kristy) in navigation menu source code	github.com/joshualparris/Parris-Life-Dashboard	CRITICAL	Make repo private. Purge git history if spouse name committed in earlier commits.

4. FAMILY AND CHILD PRIVACY RISKS

The following publicly accessible sources expose information about family members. This section is handled with care. Specific personal details are summarised rather than repeated in full.

4.1 Children

Two children's first names are embedded in public-facing URLs, app titles, and page metadata across multiple platforms. Because these apps are deployed under the subject's GitHub identity, an observer can trivially link child names to the parent's full identity, employer, education, and location history. The apps appear to be co-viewed learning tools (appropriate), but their public naming creates a permanent indexable record that associates specific children's names with a parent's full identity profile.

- Child 1's first name appears in: GitHub repo name, GitHub Pages URL path, Vercel subdomain, app page title, meta description, and app body text (SylviePhonetics / sylvie-app-five).
- Child 2's first name appears in: Vercel project name, subdomain URL, and app title/description (elias-app2).
- The SylviePhonetics app includes references to literacy age, learning level, educational context (EYLF), and region (Australia, with state-specific labels) — building a detailed portrait of the child's learning stage.
- Recommendation: Rename both apps and repos to generic names (e.g. 'PhonicsGame', 'ToddlerApp'). Remove children's names from all public metadata, titles, and URLs.

4.2 Spouse

The spouse's first name (Kristy) is confirmed in two separate public sources: the Life Dashboard navigation menu and the Dubbo Job Radar app title. The Job Radar app additionally confirms a planned relocation to Dubbo and a joint job search — giving an observer geographic, relational, and financial-intent context.

- Spouse first name publicly indexed via Life Dashboard navigation source and Dubbo Job Radar app title.
 - Planned relocation to Dubbo is publicly disclosed via the Job Radar app.
 - Recommendation: Remove spouse name from all public app titles and metadata. Make the Life Dashboard repo private.
-

5. WORK AND PROFESSIONAL RISKS

The ZoomInfo aggregator profile is the highest professional risk. It consolidates employment history, educational background, and partial contact information in a single indexed page accessible without login.

- Current employer: La Trobe University, role: Senior Customer Care Officer — confirmed via ZoomInfo.
 - Past employers named: Bendigo Bowling Centre, New Freedom Bakery, Reed Graduation Services, Pilgrim Books (trainee).
 - Educational credentials: Bachelor of Outdoor Education Extended (La Trobe), Certificate III Library & Information Services (TAFE NSW), Diploma of Christian Studies (Cornerstone Community Australia), HSC from Dubbo Christian School.
 - Email pattern inferred: ZoomInfo snippet suggests j***@latrobe.edu.au — the pattern is publicly guessable as jparris@latrobe.edu.au or j.parris@latrobe.edu.au.
 - LinkedIn public snippet confirms 'Business Owner at Parris Tech Services' — suggesting concurrent self-employment alongside La Trobe role.
 - Risk: A phisher could craft a highly convincing La Trobe University-themed spear-phishing email using the role, department context, and email pattern.
 - Recommendation: Submit ZoomInfo removal. Review LinkedIn privacy settings. Avoid listing employer in public GitHub bios.
-

6. TECHNICAL AND DEVELOPER RISKS

6.1 GitHub Accounts

Two separate GitHub accounts with 70 combined public repositories were confirmed. The joshualparris account (42 repos) appears to be the primary identity account linked to GitHub Pages deployments. The joshuaparris-max account (28 repos) appears to be a secondary/work-style account. Both accounts' repository lists, commit histories, and GitHub Pages deployments are publicly visible.

- github.com/joshualparris — 42 repos. Confirmed repos include: Parris-Life-Dashboard, SylviePhonetics, Sleepy, HealthLens, ResearchGems.
- github.com/joshuaparris-max — 28 repos. Confirmed repos include: MSPQuest-JoshHub, CanonRPG, JoshHealth, PowerApp.
- GitHub Pages deployments from joshualparris are publicly indexed (joshualparris.github.io/*).
- Vercel deployments are publicly accessible by URL — no authentication in place on the most sensitive apps.

- PowerApp described as 'private, safety-first educational guide for adult couples' — yet the Vercel deployment is publicly accessible.
- Recommendation: Conduct a full repo audit. Make all personal/family/health/finance repos private. Enable GitHub secret scanning. Check commit history for any committed .env files, API keys, or tokens.

6.2 Vercel Apps — Sensitive Deployments

Multiple Vercel deployments are publicly accessible and contain or reference sensitive personal information. Key concerns:

URL	Severity	Concern
josh-dashboard-black.vercel.app	CRITICAL	Personal intelligence dashboard — 4yr data portrait. YouTube 41k videos, ChatGPT 4.6k conversations, YNAB/Bendigo Bank finances, ANZ transactions, sleep 2,345 nights, weight, Google Maps reviews.
work-app-pearl.vercel.app	HIGH	Dubbo Job Radar for Josh and Kristy Parris — confirms spouse name, relocation plan.
joshualparris.github.io/Parris-Life-Dashboard/	CRITICAL	Personal life system with Finances, Health, Sylvie, Kristy, Work, Faith sections.
health-lens-rust.vercel.app	HIGH	Personal health data analyser — 'upload your data' — titled with subject's name.
elias-app2.vercel.app	HIGH	Child's name in URL and app title.
sylvie-app-five.vercel.app	HIGH	Child's name in URL; detailed learning profile embedded.
power-app-delta.vercel.app	MEDIUM	Described as private adult couples educational tool — publicly accessible.
research-atlas-phi.vercel.app	LOW	Research document explorer — review for embedded personal data.

7. OLD AND FORGOTTEN CONTENT

- Wayback Machine: The 'Long Walk to Parris' Weebly site was referenced in the subject's own notes but not directly verified live in this session. Check web.archive.org for longwalktoparris.weebly.com to see if archived snapshots expose old contact info, photos, or biographical content.
- ZoomInfo profile includes employment history going back to trainee/bookshop roles — this data was likely sourced from LinkedIn history and is now independently cached.
- GitHub commit history may contain deleted files that are still accessible via git history. Check for any .env, config, or credential files that were committed and then deleted.
- YouTube channel JoshuaParris1994 was noted but not directly verified in this session. Check for public playlists, liked videos (if public), or community posts that reference personal details.
- Simple Wikipedia user page joshua.parris — not directly verified but noted as a known handle; Wikipedia user pages are public and indexed.
- Academia.edu profile — not directly verified but listed as a known platform; check for academic papers or bios that reference address, institution, or personal details.
- Medium profile — not directly verified; check for old blog posts that may reference personal life, health, or family.

8. ATTACKER INFERENCE ANALYSIS

The following summarises what a malicious actor could realistically infer or misuse from the combined public footprint. No exploitation instructions are provided — this is purely a risk framing.

■ Spear-phishing — La Trobe University

Full name + employer + role + email pattern (j***@latrobe.edu.au) + education history enables a highly personalised phishing email impersonating La Trobe HR, IT, or a colleague. The subject's Outdoor Education degree and administrative roles are specific enough to bypass generic security awareness training.

■ Spear-phishing — Parris Tech Services

Sole trader / business owner status means the subject may receive supplier emails, invoices, or contract requests. A fake invoice or supplier registration email exploiting 'Parris Tech Services' branding could be effective.

■ Child safety risk

Both children's first names are linked to the parent's full identity, employer, and approximate location (Bendigo/Dubbo, Australia). The SylviePhonetics app references her literacy age and learning profile. A malicious actor with intent to harm the family has a starting point to correlate school-age details.

■ Financial social engineering

The intelligence dashboard publicly discloses that the subject uses YNAB for budgeting, banks with Bendigo Bank and historically with ANZ, and covers finance data from 2019–2025. This is enough to craft a convincing impersonation of either financial institution.

■ Password reset / security question risk

Publicly available data includes: children's names, spouse's name (Kristy), past employers (Pilgrim Books, Reed Graduation, Bendigo Bowling), educational institutions (Dubbo Christian School, La Trobe, Cornerstone, TAFE NSW), location history (Dubbo, Bendigo), and interests (outdoor education, faith, RPG games). Most common security questions are answerable from this footprint.

■ Routine and location patterns

The intelligence dashboard references sleep, step, and activity data. While the raw data appears to be uploaded by the user rather than live-streamed, the existence of consistent routine data (YouTube watch heatmap by hour, day-of-week patterns) could inform physical surveillance if combined with location data.

■ Reputational risk

The PowerApp (described as a 'private, safety-first educational guide for adult couples') is publicly deployed. If the content is more sensitive than the meta description suggests, its existence under the subject's GitHub identity could create professional or reputational exposure.

9. REMEDIATION PLAN

Do Today (Critical Actions)

- Make github.com/joshualparris/Parris-Life-Dashboard PRIVATE immediately.
- Password-protect or take offline: josh-dashboards-black.vercel.app (intelligence dashboard).
- Rename EliasApp Vercel project to a neutral name (remove child's name from subdomain and metadata).
- Rename SylviePhonetics repo and Vercel deployment to a neutral name.
- Review GitHub repos for any committed .env files, API keys, tokens, or secrets. Rotate any exposed credentials immediately.
- Check Parris-Life-Dashboard and intelligence dashboard repos for hardcoded credentials or API keys in commit history.
- Remove 'Josh and Kristy Parris' from work-app-pearl.vercel.app app title and make repo private.

Do This Week

- Submit ZoomInfo removal request: zoominfo.com/about/privacy-center/removal
- Review all 70 public GitHub repos and make personal/family/health repos private.
- Audit SylviePhonetics and Parris-Life-Dashboard git commit histories for sensitive data using BFG Repo Cleaner or git filter-repo.
- Enable GitHub secret scanning on all repositories (Settings > Security).
- Request Google Search removal for cached pages of sensitive apps: search.google.com/search-console/remove-outdated-content
- Request Bing URL removal: bing.com/webmaster/tools
- Review LinkedIn privacy settings — restrict who can see contact info, connections list, and activity.
- Check and clean Medium, Academia.edu, and YouTube profiles if they contain personal location or family data.
- Rename all personal apps to use generic titles rather than family members' names.
- Verify ABN Lookup entry for Parris Tech Services — check what address is registered (note: ABN address cannot be hidden but can be updated).

Do This Month

- Create a clear public/private identity separation: one public-facing developer GitHub identity with only professional/portfolio repos, and a separate private account for personal tools.
- Implement a naming convention for personal apps that avoids real names: use codenames or project codes.
- Set up Google Alerts for 'Joshua Parris', 'Joshua Luke Parris', 'Parris Tech Services', 'joshualparris' to monitor new indexing.
- Conduct a quarterly personal OSINT check using the search queries in this report.
- Review all Vercel projects and apply password protection to any apps containing personal data.
- Consider a Wayback Machine exclusion request for the Parris Life Dashboard and intelligence dashboard if they were crawled: help.archive.org
- Check iNaturalist / Atlas of Living Australia for any records linked to your name that include location data.

10. TAKEDOWN AND PRIVACY LINKS

Resource	URL / Path
GitHub — Make repo private	github.com > Repo > Settings > Danger Zone > Change visibility

Resource	URL / Path
GitHub — Secret scanning	github.com > Repo > Settings > Security > Secret scanning
GitHub — Remove sensitive git history	docs.github.com/en/authentication/keeping-your-account-and-data-secure/removing-sensitive-data-from-a-repository
Vercel — Environment variables	vercel.com/dashboard > Project > Settings > Environment Variables
Vercel — Password protection	vercel.com/docs/security/deployment-protection
Google Search removal	search.google.com/search-console/remove-outdated-content
Bing content removal	bing.com/webmaster/tools/content-removal
Wayback Machine exclusion	help.archive.org/help/how-do-i-request-to-remove-content-from-archive-org
ZoomInfo opt-out	zoominfo.com/about/privacy-center/removal
LinkedIn privacy settings	linkedin.com/mypreferences/d/categories/privacy
YouTube privacy	myaccount.google.com/data-and-privacy
Medium — Delete content	help.medium.com/hc/en-us/articles/213107468
ABN Lookup info	abr.business.gov.au — cannot remove ABN but can update registered address
Have I Been Pwned (self-check)	haveibeenpwned.com — check if email appears in known breaches

11. ONGOING MONITORING PLAN

- Set up Google Alerts: 'Joshua Luke Parris', 'Joshua Parris Bendigo', 'Joshua Parris La Trobe', 'Parris Tech Services', 'joshualparris', 'joshuaparris-max'.
- Enable GitHub secret scanning on all repositories and review alerts weekly.
- Before creating any new public repo or Vercel deployment, check: does it contain real names, family members, health data, financial data, or internal URLs?
- Run a quarterly OSINT self-audit using the search queries listed in the original brief.
- Check Have I Been Pwned ([haveibeenpwned.com](#)) for your email addresses quarterly.
- Review all Vercel project names and app metadata every 6 months.
- After any job change, update or remove references to the previous employer across all public profiles and apps.
- Periodically search Google/Bing for children's first names combined with your own name or GitHub username to detect new indexing.
