

GitHub Portfolio Audit

Repository, app, deployment and consolidation review

Prepared for Josh Parris - Status snapshot as at 22 May 2026

This audit is designed to reduce overwhelm, protect work from accidental loss, and identify a practical next-step order across many overlapping experiments, apps, games, dashboards and training tools.

Important limitation: this is a live, best-effort audit using the GitHub connector, the repository/app list supplied by Josh, selected deployed-app fetches, and selected package/document inspections. It is not a full local clone/build/test/security audit of every repository.

Executive summary

The portfolio is productive but crowded. The strongest work is not a single repo; it is a system of related apps: JoshHub as the catalogue/living OS, DCS/PD apps as training tools, Waypoint as a wellbeing/professional rhythm app, and a large creative game cluster. The main problem is not lack of ideas; it is duplication, unclear source-of-truth, and deployment drift.

- JoshHub should become the single source-of-truth catalogue: every app should have one canonical repo, one deployment URL, one status, and one next action.
- The DCS/PD family is useful and relatively mature, but there are at least three related codebases with different dependency versions. Pick one canonical production/training version and label the others as archive or forks.
- ParrisDubboMover has enough code structure to be worth keeping, but the client/server/backend split needs to be fixed before any new feature work.
- There are many D&D/game repos and duplicate deployments. Keep the best version of each game family and archive static exports after backup.
- Several repositories appear empty or placeholder-sized; these should be archived, deleted only after backup, or repurposed deliberately.
- Live deployments exist for many apps, but several returned no readable content or fetch errors through the web reader. Those need manual browser QA before claiming them as healthy.

Portfolio posture

Area	Current posture	Risk	Recommended posture
Central catalogue	JoshHub is active and live, and already flags broken/needs-attention items.	If stale, it becomes another confusing dashboard.	Make JoshHub the portfolio register and maintenance cockpit.
Professional learning	DCSPrep/DCSPD/DCSPProfessionalDevelopment are live or deployable and have strong PD/IT learning value.	Multiple versions may drift; DCS-specific wording may reduce general portfolio value.	Choose one canonical PD app; generalise copy where appropriate.
Business/practical apps	ParrisDubboMover, ParrisTech apps, Budget, Piano, GoldFinder and FireAwareness exist across accounts.	Some are likely partial or deployment-broken.	Keep only apps with clear daily, business or portfolio value.
Creative/game apps	Very large cluster of D&D, RPG, map and fiction tools.	Duplicate/static exports hide the true source repo.	Group by family; keep one source and one playable deployment per family.
Archives/assets	Docs, Assets, Misc, exitbackup, random-play and placeholder repos exist.	Clutter can trigger accidental deletion/staging mistakes.	Archive safely after a backup and source check.

Evidence base and audit confidence

Sources used

- User-supplied repository list across joshuaparris-max, joshualparris, parristechservices-prog, joshuaparrisdadlan-stack and related external references.
- User-supplied app-links file containing live URLs, known notes such as the ParrisDubboMover backend/API issue, and additional catalogue entries.
- GitHub connector metadata for accessible installed repositories, including owner/name, visibility, default branch, size and permission level for a substantial subset of the repos.
- Selected GitHub file inspections: package.json for JoshHub, DCSPD, DCSPrep, DCSPProfessionalDevelopment, ParrisDubboMoverApp-Main, AIDungeonMaster, Waypoint and ClearCore; document.md for the JoshHub audit action plan.
- Selected live deployment fetches through the web reader for JoshHub, DCSPrep, DCSPD, DCSPProfessionalDevelopment, Waypoint, HugCoach, LifeHub, Budget, and several apps requiring manual browser confirmation.

Confidence categories

Confidence	Meaning	Typical action
High	Repo metadata was visible via GitHub connector and/or package/app content was inspected.	Safe to plan next code/documentation action.
Medium	Repo or URL was listed and appears related to a known project family, but no direct package/content inspection was completed.	Check README/package/local status before changing.
Low	Only a listing or URL is available; repo may be static, empty, duplicate or externally owned.	Do not delete or rely on it until manually verified.

Security and privacy note

None of these personal or training apps should store real student, staff, parent, credential, network, medical, financial or sensitive operational details unless the app has a deliberately designed secure backend, access control, backup model and retention policy. For most current projects, treat them as personal/local learning or portfolio apps only.

Priority project deep dives

JoshHub

Repos	joshualparris/JoshHub
Purpose	Central living OS and app catalogue
Finding	Verified as a Next 16/React 19 app with dev/build/start/lint/test scripts and a generate-projects inventory script. Live dashboard is readable and already lists quick-launch apps and a broken/needs-attention section. Highest leverage project because it can organise the rest.
Next action	Stabilise first. Add a repo-status register, canonical links, broken-link log, and one next action per project. Avoid broad git add/delete/move until nested repos and assets are mapped.

DCS/PD family

Repos	joshualparris/DCSPD; joshualparris/DCSPrep; joshuaparris-max/DCSPProfessionalDevelopment
Purpose	Training / professional development dashboards
Finding	Three related Next 14 DCSPrep-style codebases are visible. Live DCSPrep/DCSPD/DCSPProfessionalDevelopment deployments are readable. Their scripts and dependencies differ, which is normal for forks but risky if no canonical branch is chosen.
Next action	Choose one canonical PD app. Rename/generalise where needed for portfolio use. Freeze old versions with README status notes.

Waypoint

Repos	parristechservices-prog/Waypoint
Purpose	Professional growth and wellbeing hub
Finding	Verified as a small Next 14 parris-compass app using Drizzle/better-sqlite/date-fns. Live Waypoint page is readable and coherent.
Next action	Maintain selectively. Keep purpose boundary clear so it does not duplicate JoshHub.

ParrisDubboMover

Repos	joshualparris/ParrisDubboMoverApp-Main; joshuaparris-max/ParrisDubboMoverApp; joshuaparris-max/pdm-parris-dubbo-mover
Purpose	Moving/planning app
Finding	The main repo is a two-workspace NPM project with Vite/React client and Express/TypeScript server. User-supplied notes and JoshHub indicate backend/API is currently not working.
Next action	Fix backend deployment/environment first. Document client URL, server URL, database/storage model, and what is currently broken.

AIDungeonMaster / PartyAI

Repos	parristechservices-prog/AIDungeonMaster; joshuaparrisdadlan-stack/PartyAI
Purpose	AI DM / party play prototype
Finding	AIDungeonMaster is a Next 16/React 19 PartyQuest v0 app with test scripts. PartyAI is a related small repo. Live AI Dungeon Master fetch needs manual browser QA.
Next action	Keep as a focused prototype. Decide whether PartyAI or AIDungeonMaster is canonical, then connect rules engine, lobby, and safety/ruling scope.

ClearCore / HugCoach / LifeHub

Repos	joshualparris/ClearCore; joshualparris/HugCoach; joshualparris/LifeHub; lifehubdashboard
Purpose	Personal OS, coaching, wellbeing and dashboard apps
Finding	HugCoach and LifeHub deployments are readable. ClearCore repo is dependency-heavy and likely a Replit-style full-stack app. These overlap with JoshHub but may contain reusable UI/logic.
Next action	Harvest useful patterns, then either merge concepts into JoshHub or keep one clear standalone app per purpose.

Game cluster

Repos	Whispering Wilds, Realms Atlas, Delve, Lantern Road, KKC, Rothfuss, Elodin, AshFallen, MysteriousDepths, Null, OrgScape, LetsPlayDnd, etc.
Purpose	Creative games, D&D tools and fiction-map experiments
Finding	There are many playable URLs and repeated repos across accounts. Some are tiny/static, some are large, some are on Itch/GitHub Pages/Vercel/Railway/Replit.
Next action	Create a game-family matrix. Keep one source repo and one live build for each family; archive the rest after backup.

Project family map

This view matters more than the raw repo count. Many repository names are different copies or versions of the same underlying idea.

Family	Repo count	Representative repos	Recommendation
D&D / games / fiction tools	45	joshualparris/AshFallen, joshualparris/ashfaller, joshualparris/breach-command, joshualparris/BucklandBlocks, joshualparris/BucklandBlocks1, joshualparris/delve, joshualparris/Echo, joshualparris/elodin-deep-lore ...	Group by game family; keep one source and one deploy per family.
Personal OS / wellbeing / dashboards	16	joshualparris/ClearCore, joshualparris/HugCoach, joshualparris/JoshDashboard2, joshualparris/JoshDashboard3, joshualparris/JoshDashboard4, joshualparris/JoshNFCAudio, joshualparris/JoshTapApp, joshualparris/LifeHub ...	Consolidate into JoshHub or intentionally separate.
Other / needs classification	8	joshualparris/3layers, joshualparris/alfie, joshualparris/Sleepy, joshualparris/SylviePhonetics, joshuaparris-max/FieldNotes, joshuaparrisdadlan-stack/OrgScape, joshuaparrisdadlan-stack/the-consultancy-beneath, SYDNEYLAW/StarLodgeApp	Manually inspect before decisions.
Misc / assets / archive	6	joshualparris/newfileqqwertuhvgjkk.py, joshuaparris-max/exitbackup, joshuaparris-max/random-play, joshuaparrisdadlan-stack/Assets, joshuaparrisdadlan-stack/Docs, joshuaparrisdadlan-stack/Misc	Archive after backup and source check.
Parris Tech / practical utilities	6	joshualparris/ParrisTechApp, joshualparris/ParrisTechServicesApp, joshuaparris-max/GoldFinder, joshuaparris-max/JoshFireAwareness, joshuaparris-max/ParrisBudgetApp, joshuaparris-max/ParrisPiano	Keep only if daily/business/portfolio useful.
DCS / training apps	5	joshualparris/DCSPD, joshualparris/DCSPrep, joshuaparris-max/DCSCompanion, joshuaparris-max/DCSProfessionalDevelopment, joshuaparrisdadlan-stack/DCSCompanion	Pick one canonical DCS/PD codebase; archive old forks.
Parris Dubbo Mover	4	joshualparris/ParrisDubboMoverApp-Main, joshuaparris-max/ParrisDubboMoverApp, joshuaparris-max/pdm-parris-dubbo-mover, joshuaparrisdadlan-stack/ParrisDubboMover	Fix backend/deployment before feature work.
JoshHub / central catalogue	2	joshualparris/JoshHub, joshuaparrisdadlan-stack/JoshHub	Make canonical source-of-truth catalogue.
MSP / professional development	1	joshuaparris-max/MSPQuest	Prioritise if directly useful for Avance/MSP growth.

Live deployment/app status snapshot

Only selected URLs were live-fetched in this pass. The full URL list is included below because it is valuable as a portfolio catalogue, but many URLs need manual browser QA.

URL	Observed status / note
https://josh-hub-two.vercel.app/dashboard	Live, readable: JoshHub living OS dashboard.
https://realms-atlas-readable-map-patch.vercel.app/	Listed Vercel deployment; manual QA recommended.

Repository index and recommended disposition

This table is intentionally action-oriented. It should become a living source-of-truth inside JoshHub, ideally as data plus a generated report page.

Priority	Repository	Family	GitHub evidence	Branch / size	Recommended disposition	Main risk
P1	joshualparris/DCSPD	DCS / training apps	GitHub connector	main / 103328 KB	Consolidate - choose canonical DCS/PD codebase	Multiple related copies can drift; avoid sensitive DCS data in personal tools.
P1	joshualparris/DCSPrep	DCS / training apps	GitHub connector	main / 242 KB	Consolidate - choose canonical DCS/PD codebase	Multiple related copies can drift; avoid sensitive DCS data in personal tools.
P1	joshualparris-max/DCSPProfessionalDevelopment	DCS / training apps	GitHub connector	deploy-ready / 51828 KB	Consolidate - choose canonical DCS/PD codebase	Multiple related copies can drift; avoid sensitive DCS data in personal tools.
P1	joshualparris/JoshHub	JoshHub / central catalogue	GitHub connector	main / 49184 KB	Stabilise - make source of truth	Central catalogue can become unreliable if stale links/duplicates accumulate.
P2	parristechservices-prog/AIDungeonMaster	D&D / games / fiction tools	GitHub connector	main / 147 KB	Active prototype - verify deployment/runtime	High duplication risk; source/static/export boundaries may be unclear.
P2	joshualparris/ParrisDubboMoverApp-Main	Parris Dubbo Mover	GitHub connector	main / 25656 KB	Fix backend/deploy split before new features	Known backend/API issue may make live app look usable while core workflow is broken.
P2	joshualparris/ClearCore	Personal OS / wellbeing / dashboards	GitHub connector	main / 498 KB	Consolidate into JoshHub or keep as standalone intentionally	Overlapping dashboards may split attention and duplicate features.
P2	joshualparris/HugCoach	Personal OS / wellbeing / dashboards	GitHub connector	main / 8299 KB	Consolidate into JoshHub or keep as standalone intentionally	Overlapping dashboards may split attention and duplicate features.
P2	joshualparris/LifeHub	Personal OS / wellbeing / dashboards	GitHub connector	main / 19 KB	Consolidate into JoshHub or keep as standalone intentionally	Overlapping dashboards may split attention and duplicate features.
P2	joshualparris/Parris-Life-Dashboard	Personal OS / wellbeing / dashboards	GitHub connector	main / 38290 KB	Consolidate into JoshHub or keep as standalone intentionally	Overlapping dashboards may split attention and duplicate features.
P2	joshualparris-max/lifehubdashboard	Personal OS / wellbeing / dashboards	Listed by Josh / needs verification	Not verified	Consolidate into JoshHub or keep as standalone intentionally	Overlapping dashboards may split attention and duplicate features.
P2	parristechservices-prog/Waypoint	Personal OS / wellbeing / dashboards	GitHub connector	main / 328 KB	Maintain selectively - clear purpose boundary	Overlapping dashboards may split attention and duplicate features.
P3	joshualparris/AshFallen	D&D / games / fiction tools	GitHub connector	main / 186 KB	Keep best version; archive duplicates/static exports	High duplication risk; source/static/export boundaries may be unclear.
P3	joshualparris/ashfaller	D&D / games / fiction tools	GitHub connector	main / 163 KB	Keep best version; archive duplicates/static exports	High duplication risk; source/static/export boundaries may be unclear.
P3	joshualparris/breach-command	D&D / games / fiction tools	Listed by Josh / needs verification	Not verified	Keep best version; archive duplicates/static exports	High duplication risk; source/static/export boundaries may be unclear.
P3	joshualparris/BucklandBlocks	D&D / games / fiction tools	GitHub connector	main / 3602 KB	Keep best version; archive duplicates/static exports	High duplication risk; source/static/export boundaries may be unclear.
P3	joshualparris/delve	D&D / games / fiction tools	GitHub connector	master / 33 KB	Keep best version; archive duplicates/static exports	High duplication risk; source/static/export boundaries may be unclear.
P3	joshualparris/Echo	D&D / games / fiction tools	GitHub connector	main / 19 KB	Keep best version; archive duplicates/static exports	High duplication risk; source/static/export boundaries may be unclear.
P3	joshualparris/elodin-deep-lore	D&D / games / fiction tools	GitHub connector	main / 42 KB	Keep best version; archive duplicates/static exports	High duplication risk; source/static/export boundaries may be unclear.
P3	joshualparris/ElodinDeepLore	D&D / games / fiction tools	GitHub connector	main / 6863 KB	Keep best version; archive duplicates/static exports	High duplication risk; source/static/export boundaries may be unclear.

Campaign / AI DM	joshuaparris-max/campaign-copilot, joshuaparrisdadlan-stack/PartyAI, joshuaparrisdadlan-stack/campaign-copilot, parristechservices-prog/AIDungeonMaster	Choose canonical repo, label forks/archive/static copies, document deployment.

Recommended 30-day action plan

Day 1-2: freeze and protect

- Do not bulk delete, move, or git add -A across JoshHub or nested project folders.
- Export this report table into JoshHub as portfolio-status.json or PORTFOLIO-STATUS.md.
- For each P1/P2 project, add a one-line README status: Active, Maintain, Archive, or Investigate.

Day 3-7: make JoshHub reliable

- Add a Portfolio page with canonical repo, live URL, status, broken flag and next action.
- Mark ParrisDubboMover as broken-backend until server/API is fixed.
- Add a stale-link check process: manual first, automated later.

Week 2: consolidate professional apps

- Decide whether DCSPD, DCSPrep or DCSPProfessionalDevelopment is canonical.
- Generalise one version for transferable professional development if it is for portfolio use.
- Archive old forks with clear README banners.

Week 3: repair one practical app

- Fix ParrisDubboMover backend/API or choose a simpler static-only scope.
- Write deployment notes: frontend, backend, database/storage, environment variables, known limits.
- Avoid adding features until build/deploy/start is predictable.

Week 4: rationalise games

- Make a game-family matrix: Whispering Wilds, Delve, Lantern Road, KKC, Realms Atlas, AshFallen, etc.
- For each family choose one canonical source and one playable link.
- Move old static exports to archive only after source repo is confirmed.

Definition of done for a repo

- README says what the app is, who it is for, current status, live URL, and next action.
- package.json scripts are simple and actually used: dev, build, start/test where relevant.

- Deployment target is known and documented: Vercel, GitHub Pages, Itch, Railway, Replit, or static export.
- No secrets, real student/staff data, credentials or private operational data are committed.
- JoshHub catalogue row is updated and points to the canonical repo and deployment.

Appendix A - Selected technical findings

Repo	Observed technical detail	Implication
joshualparris/JoshHub	Next 16 + React 19 app; has dev/build/start/lint/test and generate-projects inventory script.	Good candidate for portfolio control centre; keep dependency and inventory scripts healthy.
joshualparris/DCSPD	Next 14 DCSPRep app; includes pdfjs-dist; dev/build/start/test scripts.	Pick one canonical version; avoid drift across forks.
joshualparris/DCSPRep	Smaller Next 14 DCSPRep app; related but not identical to DCSPD.	Pick one canonical version; avoid drift across forks.
joshualparris-max/DCSPProfessionalDevelopment	Next 14 DCSPRep variant on deploy-ready branch; dependency versions differ from DCSPD/DCSPRep.	Pick one canonical version; avoid drift across forks.
joshualparris/ParrisDubboMoverApp-Main	NPM workspace with client and server; React 19/Vite client and Express/TS server with SQLite/Postgres/document parsing libs.	Backend deployment is the core risk, not client UI polish.
parristechservices-prog/AIDungeonMaster	Next 16 + React 19 PartyQuest v0 app with test scripts.	Document and stabilise before feature expansion.
parristechservices-prog/Waypoint	Next 14 parris-compass app using Drizzle/better-sqlite/date-fns; wellbeing/professional growth focus.	Document and stabilise before feature expansion.
joshualparris/ClearCore	Large Replit-style full-stack app with Express, Drizzle, Radix, Vite tooling and many UI dependencies.	Dependency-heavy; needs careful scope control and security review if public-facing.

Appendix B - Suggested repo status labels

Label	Meaning	Use when
ACTIVE	Current focus; allowed to receive improvements now.	JoshHub, canonical PD app, one or two practical/prototype apps.
MAINTAIN	Working or useful, but not a current build focus.	Stable deployments, family apps, utility apps.
INVESTIGATE	Potentially valuable, but source/deploy/state unclear.	Unverified URLs, unknown source/static exports.
ARCHIVE	Preserve but stop developing.	Duplicate forks, old game builds, stale experiments.
DELETE-CANDIDATE	Probably disposable but not yet deleted.	Empty placeholders only after backup and source check.
